POWER DOOR LOCK CONTROL SYSTEM

PRECAUTION

1. DISCONNECT AND RECONNECT CABLE OF NEGATIVE BATTERY TERMINAL

NOTICE:
When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

<table>
<thead>
<tr>
<th>System Name</th>
<th>See procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>METER / GAUGE SYSTEM</td>
<td>See page ME-10</td>
</tr>
</tbody>
</table>

(a) Before performing electronic work, disconnect the cable from the negative (-) battery terminal in order to prevent it from shorting and burning out.

(b) Before disconnecting and reconnecting the battery cable, turn the ignition switch OFF and the headlight dimmer switch OFF. Then loosen the terminal nut completely. Do not damage the cable or terminal.

(c) When the battery cable is disconnected, the clock and radio settings and stored DTCs are erased. Therefore, before disconnecting the battery cable, make a notes of them.

SYSTEM DESCRIPTION

1. **POWER DOOR LOCK CONTROL SYSTEM DESCRIPTION**
   The power door lock system locks / unlocks all the doors simultaneously.
   The door control switch of the power window regulator master switch or door control switch on the front passenger side sends lock / unlock request signals to the main body ECU. Then, the main body ECU sends these requests to the lock motors in each door to lock / unlock all the doors simultaneously. Operating the driver side door, front passenger side door, or back door lock using a key sends lock / unlock request signals to the main body ECU.

2. **FUNCTION OF MAIN COMPONENTS**

<table>
<thead>
<tr>
<th>Component</th>
<th>Function</th>

</tbody>
</table>

3. **DESCRIPTION**
   This system is controlled by the main body ECU. The main body ECU outputs signals to each door lock motor. The door lock control system in the vehicle has the following functions:

<table>
<thead>
<tr>
<th>Function</th>
<th>Outline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manual lock and unlock function</td>
<td>Locks / unlocks all doors by door control switch (for front driver door side) and door control switch (for front passenger side) lock operation (manual operation)</td>
</tr>
<tr>
<td>Key-linked lock and unlock function</td>
<td>Linked with key cylinder. Locks / unlocks all doors when lock / unlock operation is possible.</td>
</tr>
<tr>
<td>Key-linked 2-step unlock</td>
<td>Unlocks only driver door by turning key cylinder once and unlocks other doors by turning it twice.</td>
</tr>
<tr>
<td>Key lock-in prevention function</td>
<td>When key is inserted in ignition key cylinder and door lock operation is performed, all doors are unlocked.</td>
</tr>
<tr>
<td>All doors lock with transmitter</td>
<td>Pressing transmitter's LOCK switch locks all doors</td>
</tr>
<tr>
<td>All doors unlock with transmitter</td>
<td>Pressing transmitter's UNLOCK switch unlocks all doors</td>
</tr>
</tbody>
</table>
HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
• Use these procedures to troubleshoot the power door lock control system.
• *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK

NEXT

3 INSPECT BATTERY VOLTAGE

Standard:
11 to 14 V
If the voltage is below 11 V, recharge or replace battery before proceeding.

NEXT

4 INSPECT COMMUNICATION FUNCTION OF LARGE-SCALE MULTIPLEX COMMUNICATION SYSTEM (BEAN)*

(a) Use the intelligent tester to check if the Multiplex Communication System (MPX) is functioning normally.

Result

<table>
<thead>
<tr>
<th>Result</th>
<th>Proceed to</th>
</tr>
</thead>
<tbody>
<tr>
<td>MPX DTC is not output</td>
<td>A</td>
</tr>
<tr>
<td>MPX DTC is output</td>
<td>B</td>
</tr>
</tbody>
</table>

B GO TO MULTIPLEX COMMUNICATION SYSTEM

END
CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:
- When the customer requests modification of items, first make sure that the functions can be customized.
- Make a note of the current settings before customization.
- When troubleshooting items, first make sure that the functions are set to their default settings.
- The following items can be customized.

Power door lock control system:

<table>
<thead>
<tr>
<th>Display (Item)</th>
<th>Default</th>
<th>Contents</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>UNLK/KEY TWICE</td>
<td>ON</td>
<td>Unlocks only driver side door when driver side door key cylinder turned to unlock once, and unlocks all doors when turned to unlock twice. For OFF setting, turning it once unlocks all doors.</td>
<td>ON / OFF</td>
</tr>
</tbody>
</table>
HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

### Power door lock control system

TERMINALS OF ECU

1. CHECK MAIN BODY ECU

Main Body ECU:
Left View:

Rear View:
(a) Disconnect the 1A, 1B, 1E, and 1H main body ECU connectors.
(b) Measure the voltages and resistances of the wire harness side connectors.

<table>
<thead>
<tr>
<th>Symbols (Terminal No.)</th>
<th>Wiring Color</th>
<th>Terminal Description</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>GND1 (1H-2) - Body ground</td>
<td>W-B - Body ground</td>
<td>Ground</td>
<td>Always</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>BECU (1B-4) - Body ground</td>
<td>W-R - Body ground</td>
<td>Power source circuit (From battery)</td>
<td>Always</td>
<td>11 to 14 V</td>
</tr>
<tr>
<td>BDR1 (1E-9) - Body ground</td>

<td></td>
<td></td>
<td></td>
<td>Passenger side door locked</td>
<td>10 to 14 V</td>
</tr>
</tbody>
</table>
If the result is not as specified, there may be a malfunction in the wire harness.

## 2. CHECK BACK DOOR ECU

(a) Disconnect the S2 back door ECU connector.
(b) Measure the voltages and resistances of the wire harness side connectors.

### Standard:

<table>
<thead>
<tr>
<th>Symbols (Terminal No.)</th>
<th>Wiring Color</th>
<th>Terminal Description</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>BECU (S2-5) - Body ground</td>
<td>W-R - Body ground</td>
<td>Power source circuit (From battery)</td>
<td>Always</td>
<td>11 to 14 V</td>
</tr>
<tr>
<td>GND (S2-3) - Body ground</td>
<td>W-B - Body ground</td>
<td>Ground</td>
<td>Always</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the back door ECU connector.

(d) Measure the voltages of the wire harness side connectors.

### Standard voltage:

<table>
<thead>
<tr>
<th>Symbols (Terminal No.)</th>
<th>Wiring Color</th>
<th>Terminal Description</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIG (S2-6) Body ground</td>
<td>B-R - Body ground</td>
<td>Ignition switch signal</td>
<td>Ignition switch OFF</td>
<td>Below 1V</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Ignition switch ON</td>
<td>11 to 14 V</td>
</tr>
<tr>
<td>L (S5-5) - Body ground</td>
<td>L - Body ground</td>
<td>Back door key-linked operated door lock switch input</td>
<td>Back door key cylinder OFF</td>
<td>11 to 14 V</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Back door key cylinder ON (LOCK)</td>
<td>Below 1 V</td>
</tr>
<tr>
<td>UL (S5-4) - Body ground</td>
<td>R - Body ground</td>
<td>Back door key-linked operated door unlock switch input</td>
<td>Driver side door key cylinder OFF</td>
<td>11 to 14 V</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Driver side door key cylinder ON (UNLOCK)</td>
<td>Below 1 V</td>
</tr>
<tr>
<td>MPX2 (S2-1) - Body ground</td>
<td>BR-R - Body ground</td>
<td>Multiplex communication signal</td>
<td>During communication</td>
<td>Signal waveform</td>
</tr>
</tbody>
</table>

If the result is not as specified, there may be a malfunction in the wire harness.
**DATA LIST / ACTIVE TEST**

1. **READ DATA LIST**

   **HINT:**
   Using the intelligent tester's DATA LIST allows a switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
   (a) Connect the intelligent tester with CAN VIM to the DLC3.
   (b) Turn the ignition switch ON.
   (c) Read the DATA LIST according to the prompts displayed on the tester.

   **BODY:**

2. **PERFORM ACTIVE TEST**

   **HINT:**
   Performing the intelligent tester's ACTIVE TEST allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

   (a) Connect the intelligent tester with CAN VIM to the DLC3.
   (b) Turn the ignition switch ON.
   (c) Perform the ACTIVE TEST according to the prompts displayed on the tester.

ON-VEHICLE INSPECTION

1. CHECK ELECTRICAL DOOR LOCK OPERATION
   (a) Check that all doors lock when the door control switch (for manual operation) is turned to LOCK and all doors unlock when turned to UNLOCK.
   (b) Check that all doors lock when the door lock key cylinder is turned to LOCK using the mechanical key and unlock when turned to UNLOCK using the mechanical key.
   (c) Check that only the driver side door unlocks when the driver side door lock key cylinder is turned to UNLOCK and all doors unlock when turned to UNLOCK once again within 3 seconds using the key (2-step unlocking function).
   (d) Check the key lock-in prevention function.

   NOTICE:
   Perform this operation with the driver door window open to prevent the key from being locked inside the vehicle.
   (1) Insert the ignition key into the ignition key cylinder.
   (2) Check that all doors are immediately unlocked when the driver side door lock knob is turned to the lock position with the driver door open.
   (3) Check that all doors are immediately unlocked when the door control switch (for driver side) or door control switch (for front passenger side) is turned to the lock position with the driver door open.
   (4) Check that all doors are unlocked when the driver door is closed after the driver door lock knob is held in the lock position for 2 seconds with the driver door open.
All Doors cannot be Locked / Unlocked Simultaneously

DESCRIPTION
The main body ECU receives switch signals from the door control switch on the power window regulator master switch, door control switch, driver side door key cylinder, passenger side door key cylinder and back door key cylinder, and activates the door lock motor on each door accordingly.

WIRING DIAGRAM
INSPECTION PROCEDURE

1 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (DOOR LOCK)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the tester ON.
(c) Select the item below in the ACTIVE TEST and then check that the security indicator operates.
**DL–20 DOOR LOCK – POWER DOOR LOCK CONTROL SYSTEM**

### BODY

<table>
<thead>
<tr>
<th>Item</th>
<th>Test Details</th>
<th>Diagnostic Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>DOOR LOCK</td>
<td>Operate door lock motor LOCK/UNLOCK</td>
<td>-</td>
</tr>
</tbody>
</table>

**OK:**
Doors can lock / unlock.

- **OK**
  - Go to step 4

**NG**

#### 2 INSPECT FUSE (ECU-B)

(a) Remove the ECU-B fuse from the engine room R/B No.2.
(b) Measure the resistance.

**Standard resistance:**
Below 1 Ω
(c) Reinstall the ECU-B fuse.

- **NG**
  - REPLACE FUSE

**OK**

#### 3 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY, BODY GROUND)

(a) Disconnect the 1B and 1H main body ECU connectors.
(b) Measure the voltage.

**Standard voltage**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>IB-4 (BECU) - Body ground</td>
<td>11 to 14 V</td>
</tr>
</tbody>
</table>

(c) Measure the resistance.

**Standard resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>IH-2 (GND1) - Body ground</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

(d) Reconnect the main body ECU connectors.

- **NG**
  - REPAIR OR REPLACE HARNESS OR CONNECTOR

**OK**

**REPLACE MAIN BODY ECU**
4 CHECK OPERATION (ALL DOORS LOCK/ UNLOCK)

(a) All doors can be locked/unlocked at once using the following:
   • Door control switch on the power window regulator master switch (switch operation)
   • Door control switch on the front passenger side (switch operation).
   • Door key cylinder linked with door lock on the driver side (key operation)
   • Door key cylinder linked with door lock on the passenger side (key operation)
   • Door key cylinder linked with door lock on the back door (key operation)

(b) Proceed to the next step according to the symptom if all the doors cannot be locked / unlocked at once.

Result

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Proceed to</th>
</tr>
</thead>
<tbody>
<tr>
<td>All doors cannot be locked / unlocked at once using door control switch.</td>
<td>A</td>
</tr>
<tr>
<td>All doors cannot be locked / unlocked at once using door key cylinder</td>
<td>B</td>
</tr>
</tbody>
</table>

5 CHECK OPERATION (DOOR CONTROL SWITCH)

(a) Proceed to the next step according to the symptom listed in the table below.

Result

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Proceed to</th>
</tr>
</thead>
<tbody>
<tr>
<td>All doors cannot be locked / unlocked at once using door control switch on power window regulator master switch</td>
<td>A</td>
</tr>
<tr>
<td>All doors cannot be locked / unlocked at once using door control switch on front passenger side</td>
<td>B</td>
</tr>
</tbody>
</table>

6 READ VALUE OF INTELLIGENT TESTER (DOOR CONTROL SWITCH)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the items below in the "DATA LIST" and read the display on the intelligent tester.

**DL–22 DOOR LOCK – POWER DOOR LOCK CONTROL SYSTEM**

**BODY**

<table>
<thead>
<tr>
<th>Item</th>
<th>Measurement Item / Display (Range)</th>
<th>Normal Condition</th>
<th>Diagnostic Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>D/L SW-LOCK</td>
<td>Door manual lock switch signal / ON or OFF</td>
<td>ON: Door control switch on power window regulator master switch is pushed to lock position&lt;br&gt;OFF: Door control switch on power window regulator master switch is not pushed</td>
<td>-</td>
</tr>
<tr>
<td>D/L SW-UNLOCK</td>
<td>Door manual unlock switch signal / ON or OFF</td>
<td>ON: Door control switch on power window regulator master switch is pushed to unlock position&lt;br&gt;OFF: Door control switch on power window regulator master switch is not pushed</td>
<td>-</td>
</tr>
</tbody>
</table>

**OK:**

When the switch is operated, the intelligent tester displays ON and OFF as shown in the table.

**OK**  REPLACE MAIN BODY ECU

**NG**

**7** **INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (DOOR CONTROL SWITCH)**

(a) Remove the power window regulator master switch (door control switch).

(b) Measure the resistance

**Standard resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Switch Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 (E) - 2 (L1)</td>
<td>Locked</td>
<td>Below 1 Ω</td>

</tr>
</tbody>
</table>

(d) Reconnect the front door courtesy switch connector.
(e) Reconnect the main body ECU connector.

**NG** REPAIR OR REPLACE HARNESS OR CONNECTOR

**OK**

REPLACE MAIN BODY ECU
WIRELESS DOOR LOCK CONTROL SYSTEM

PRECAUTION

1. DISCONNECT AND RECONNECT CABLE OF NEGATIVE BATTERY TERMINAL
   (a) Before performing electronic work, disconnect the cable from the negative (-) battery terminal in order to prevent it from shorting and burning out.
   (b) Before disconnecting and reconnecting the battery cable, turn the ignition switch OFF and the headlight dimmer switch OFF. Then loosen the terminal nut completely. Do not damage the cable or terminal.
   (c) When the battery cable is disconnected, the clock and radio settings and stored DTCs are erased. Therefore, before disconnecting the battery cable, make a notes of them.

NOTICE:
When the cable is disconnected from the negative (-) battery terminal, initialize the following system(s) after the cable is reconnected.

SYSTEM DESCRIPTION

1. WIRELESS DOOR CONTROL SYSTEM DESCRIPTION
   (a) This system locks and unlocks the vehicle's doors remotely. The wireless control system has the following features:
   • The door control receiver performs the code identification procedure and the main body ECU operates the door lock control. A serial data link is provided for communication between the receiver and main body ECU.
   • A key-integrated type transmitter is used and it contains the following 3 switches: the door lock switch, door unlock switch and panic switch.

2. FUNCTION OF MAIN COMPONENTS

3. SYSTEM FUNCTION
   (a) Door lock / unlock function:
   With no key in the ignition key cylinder (unlock warning switch is OFF) and all door courtesy switches OFF, pressing the door control transmitter's LOCK / UNLOCK switch causes the transmitter to output faint electric waves. The transmitter sends the faint electrical wave to the door control receiver. The high frequency circuit built into the door control receiver demodulates the wave into code data, computes the data, and compares the data with previously registered ID codes. If the data is verified, a door lock / unlock request signal is output to the main body ECU. When the request signal is received, the main body ECU outputs a door lock / unlock control signal to each door lock assembly. Each door lock assembly then locks / unlocks its respective door and turns ON / OFF its door lock position switch in accordance with the signal.
(b) Answer-back function:
The main body ECU receives the door unlock detection switch’s ON / OFF signals and uses these signals to confirm if the door control operation has been completed. The main body ECU then outputs the hazard warning light control signals to flash the hazard warning lights and the wireless door lock buzzer control signals to sound the wireless door lock buzzer as an answer-back indication.

(c) The wireless door lock control system has the following functions.

<table>
<thead>
<tr>
<th>Function</th>

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
• The wireless door lock control system troubleshooting procedures are based on the premise that the power door lock system is operating normally. Check the power door lock system first before troubleshooting the wireless door lock control system.
• Use these procedures to troubleshoot the wireless door lock control system.
• *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

2 INSPECT BATTERY VOLTAGE

Standard voltage: 11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.
Result:

## CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

**HINT:**
The following items can be customized.

**NOTICE:**
- When the customer requests a change in a function, first make sure that the function can be customized.
- Record the current settings before customizing.
- When troubleshooting a function, first make sure that the function is set to the default setting.

### Wireless Door Lock Control System

<td>BZR (1B-10) - BZR2 (1B-6)</td>
<td>P-B - Y-B</td>
<td>Wireless door lock buzzer signal</td>
<td>Wireless door lock buzzer OFF → ON</td>
<td>Pulse generation</td>
</tr>
</tbody>
</table>

If the result is not as specified, there may be a malfunction in the wire harness.
2. CHECK DOOR CONTROL RECEIVER

(a) Disconnect the door control receiver connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Standard:

<table>
<thead>
<tr>
<th>Symbols (Terminal No.)</th>
<th>Wiring Color</th>
<th>Terminal Description</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>+B (E23-5) - GND (E23-1)</td>
<td>R - W-B</td>
<td>Battery (power supply)</td>
<td>Always</td>
<td>11 to 14 V</td>
</tr>
<tr>
<td>GND (E23-1) - Body ground</td>
<td>W-B - Body ground</td>
<td>Ground</td>
<td>Always</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the door control receiver connector.
(d) Measure the voltage of the wire harness side connector.

Standard voltage:

<table>
<thead>
<tr>
<th>Symbols (Terminal No.)</th>
<th>Wiring Color</th>
<th>Terminal Description</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>PRG (E23-3) - Body ground</td>
<td>G-O - Body ground</td>
<td>Door control receiver output</td>
<td>Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)</td>
<td>11 to 14 V → Pulse generation → 11 to 14 V</td>
</tr>
<tr>
<td>RDA (E23-2) - Body ground</td>
<td>L-R - Body ground</td>
<td>Door control receiver input</td>
<td>Transmitter switch ON → OFF (No key in ignition key cylinder, all doors closed)</td>
<td>Below 1V → Pulse generation → Below 1V</td>
</tr>
</tbody>
</table>

If the result is not as specified, there may be a malfunction in the wire harness.
DTC CHECK / CLEAR

1. SELF-DIAGNOSTIC MODE (OPERATING IGNITION KEY CYLINDER)

(a) Switch to self-diagnostic mode.
   (1) Establish the vehicle's initial condition.
   (2) Insert the key into the ignition key cylinder and remove it.
   (3) Within 5 seconds of removing the key, insert it into the ignition key cylinder again.
   (4) Turn the ignition switch ON and then OFF.
   (5) Within 30 seconds of turning the ignition switch OFF, perform the following operation 9 more times: Turn the ignition switch ON and then OFF.
HINT:
• Turning the ignition switch ON after the procedure above has been completed ends self-diagnostic mode.
• Do not lock or unlock doors while in self-diagnostic mode.

NOTICE:
If the system cannot enter self-diagnostic mode, the system returns to normal mode.

(b) Check that the system has switched to self-diagnostic mode by checking the wireless door lock buzzer sound.

Buzzer Output:

<table>
<thead>
<tr>
<th>T1: 0.13 seconds</th>
<th>T2: 0.5 seconds</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON</td>
<td>OFF</td>
</tr>
<tr>
<td>T1</td>
<td>T2</td>
</tr>
</tbody>
</table>
(c) Check the diagnostic outputs when the door control transmitter switch is held down. The diagnostic outputs can be checked by the wireless door lock buzzer sound.

2. SELF-DIAGNOSTIC MODE (USING INTELLIGENT TESTER)

(a) Switch to self-diagnostic mode.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the ignition switch ON and turn the intelligent tester main switch on.

HINT:
Refer to the intelligent tester operator’s manual for further details.
DATA LIST / ACTIVE TEST

1. READ DATA LIST
   HINT:
   Using the intelligent tester’s DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
   (a) Connect the intelligent tester to the DLC3.
   (b) Turn the ignition switch ON.
   (c) Read the DATA LIST in accordance with the display on the tester.

<table>
<thead>
<tr>
<th>Item</th>
<th>Measurement Item/Display (Range)</th>

OFF: Ignition key is not inserted | -               |

2. PERFORM ACTIVE TEST
   HINT:
   Performing the intelligent tester’s ACTIVE TEST allows relays, VSV, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.
   (a) Connect the intelligent tester to the DLC3.
   (b) Turn the ignition switch ON.
   (c) Perform the ACTIVE TEST in accordance with the display on the tester.

ON-VEHICLE INSPECTION

1. NOTICES WHEN CHECKING
   (a) Wireless door LOCK / UNLOCK function:
       This function operates only when the vehicle is in its initial condition (the following 3 conditions are met).
       (1) No key is inserted into the ignition key cylinder.
       (2) All the doors are closed.
       (3) The power door lock system is functioning normally.
           HINT:
           • The UNLOCK function operates even when one of the doors is open.
           • The UNLOCK function operates even when the key is inserted into the ignition key cylinder. However, the ignition switch must be OFF.
   (b) The operating range differs depending on the situation.
       (1) The operating range differs depending on the user, the way the transmitter is held and the location.
       (2) In certain areas, the operating range will be reduced due to the vehicle body shape and the influence of the surrounding environment.
       (3) The transmitter's faint electric waves may be affected if the area has strong electric waves or noise. The transmitter's operating range may be reduced or the transmitter may not function.
       (4) When the battery weakens, the operating range is reduced or the transmitter may not function.
           HINT:
           If the transmitter has had prolonged exposure to direct sunlight, such as being left on the instrument panel, the battery may weaken or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS
   HINT:
   • The switches described below transmit signals and are built into the door control transmitter.
   • The transmitter's operating range must be taken into account while checks are being made.
   (a) Make sure the vehicle is in a condition in which the wireless control functions can be operated (see above).
(b) Check the chattering prevention function.
   (1) When a switch is pressed, check that the corresponding operation occurs only once. When the switch is held down, check that the corresponding operation occurs only once and does not repeatedly activate. Lastly, when the switch is pressed at 1 second intervals, check that the corresponding operation activates once for each press of the switch.

(c) Check the automatic locking function.
   (1) When all doors are unlocked with the UNLOCK switch and none of the doors are opened or locked within 60 seconds, check that the doors are relocked automatically.

(d) Check the switch operation fail-safe function.
   (1) If the key is in the ignition key cylinder, check that the doors cannot be locked by the LOCK switch. However, this does not apply when the system is in recognition code registration mode.

(e) Check the answer-back function.
   (1) When the LOCK switch is pressed, check that the hazard warning lights flash once, the wireless door lock buzzer sounds once and all doors are locked.
   (2) When the UNLOCK switch is pressed, check that the hazard warning lights flash twice, the wireless door lock buzzer sounds twice and all doors are unlocked.
**DESCRIPTION**

The door control receiver receives signals from the transmitter and sends these signals to the main body ECU.

**WIRING DIAGRAM**

![Wiring Diagram](image)

**INSPECTION PROCEDURE**

1. **CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS**

   **OK:**
   
   Each function of wireless door lock control system operates normally using transmitter switches (see page DL-54).

   ![OK END]
2 REPLACE TRANSMITTER BATTERY

(a) After replacing the transmitter battery, check that the doors can be locked and unlocked using the transmitter switches.
   OK: Doors can be locked and unlocked with transmitter.

3 SWITCH TO SELF DIAGNOSTIC MODE

(a) Switch to self-diagnostic mode by operating the ignition key cylinder.
   (1) Make sure the vehicle is in its initial condition. Then insert the key into the ignition key cylinder and remove it.
   (2) Within 5 seconds of removing the key, insert the key into the ignition key cylinder (ignition switch OFF). Then turn the ignition switch ON and OFF.
   (3) Within 30 seconds of turning the ignition switch OFF, perform the following operation 9 times: turn the ignition switch ON and OFF.

   NOTICE: If the system cannot enter self-diagnostic mode, the system returns to normal mode.

   HINT:
   • Turning the ignition switch ON after the above operations have been completed ends self-diagnostic mode.
   • Do not lock or unlock doors during self-diagnostic mode.

(b) Check that the system has switched to self-diagnostic mode by checking the wireless door lock buzzer sound.
   OK: Buzzer pattern is same as illustration on left.

<table>
<thead>
<tr>
<th>Buzzer Output:</th>
</tr>
</thead>
<tbody>
<tr>
<td>T1: 0.13 seconds</td>
</tr>
<tr>
<td>T2: 0.5 seconds</td>

DOOR LOCK – WIRELESS DOOR LOCK CONTROL SYSTEM

5 REGISTER RECOGNITION CODE

(a) Check that the system can be switched to rewrite mode or add mode, and that a recognition code can be registered.

OK:
Recognition code can be registered.

NG
Go to step 12

6 CHECK RESPONSE OF DOOR CONTROL RECEIVER

(a) When a new or normally functioning door lock control transmitter switch for the same vehicle type is held down, check that an unmatching recognition code is output.

OK:
Unmatching recognition code is output.

NG
REPLACE DOOR CONTROL TRANSMITTER MODULE

7 REPLACE DOOR CONTROL RECEIVER

(a) After replacing the door control receiver, check that the doors can be locked and unlocked by using the transmitter LOCK and UNLOCK switches.

OK:
Doors can be locked and unlocked with transmitter.

NG
REPLACE MAIN BODY ECU

END
8 CONFIRM PROCEDURES TO ENTER SELF DIAGNOSTIC MODE

<table>
<thead>
<tr>
<th>Result</th>
<th>Proceed to</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self-diagnostic mode entry successful</td>
<td>A</td>
</tr>
<tr>
<td>Self-diagnostic mode entry unsuccessful</td>
<td>B</td>
</tr>
</tbody>
</table>

B Go to step 3

A

9 INSPECT UNLOCK WARNING SWITCH ASSEMBLY

(a) Remove the unlock warning switch.
(b) Measure the resistance.

Standard resistance

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 2</td>
<td>Not pushed</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td></td>
<td>Pushed</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

NG REPLACE UNLOCK WARNING SWITCH ASSEMBLY

OK

10 CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - MAIN BODY ECU)

(a) Disconnect the E7 main body ECU connector.
(b) Disconnect the E23 door control receiver connector.
(c) Measure the resistance.

Standard resistance

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>E7-4 (RDA) - E23-2 (RDA)</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>E7-4 (RDA) or E23-2 (RDA) - Body ground</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>E7-3 (PRG) - E23-3 (PRG)</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>E7-3 (PRG) or E23-3 (PRG) - Body ground</td>
<td>10 kΩ or higher</td>
</tr>
</tbody>
</table>

(d) Reconnect the main body ECU connector.
(e) Reconnect the door control receiver connector.

NG REPAIR OR REPLACE HARNESS OR CONNECTOR
11 CHECK DOOR CONTROL RECEIVER (OUTPUT)

(a) Measure the voltage of the connector. **Standard voltage**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>E23-2 (RDA) - Body ground</td>
<td>Transmitter switch ON→OFF (No key in ignition key cylinder, all doors closed)</td>
<td>Below 1V → Pulse generation → Below 1V</td>
</tr>
</tbody>
</table>

OK → REPLACE MAIN BODY ECU

NG

12 REPLACE DOOR CONTROL TRANSMITTER MODULE

(a) Check that the doors can be locked and unlocked by using the transmitter LOCK and UNLOCK switches.

OK:
Doors can be locked and unlocked with transmitter.

NG → REPLACE DOOR CONTROL RECEIVER

END (DOOR CONTROL TRANSMITTER MODULE DEFECTIVE)
No Answer-Back

DESCRIPTION
In this case, wireless control functions are normal but the hazard warning light or wireless door lock buzzer answer-back function does not operate.

WIRING DIAGRAM

INSPECTION PROCEDURE

1. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

   (a) Check the wireless door lock functions by operating the transmitter switches.

   Result

<table>
<thead>
<tr>
<th>Result</th>
<th>Proceed to</th>

<tr>
<td>Hazard warning light and wireless door lock buzzer answer-back function is normal</td>
<td>C</td>
</tr>
</tbody>
</table>

B Go to step 4

C REPLACE MAIN BODY ECU

3 CHECK HAZARD WARNING LIGHTS

(a) Check that the hazard warning lights flash when the hazard warning signal switch is pressed.

OK: Hazard warning lights flash when hazard warning signal switch is pressed.

NG GO TO LIGHTING SYSTEM

OK REPLACE MAIN BODY ECU
4  INSPECT WIRELESS DOOR LOCK BUZZER

(a) Disconnect the clutch switch connector.
(b) Measure the resistance.

**Standard resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 2</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

**NG**  REPLACE WIRELESS DOOR LOCK BUZZER

OK

5  CHECK HARNESS AND CONNECTOR (WIRELESS DOOR LOCK BUZZER - MAIN BODY ECU)

(a) Disconnect the A12 buzzer connector.
(b) Disconnect the 1B main body ECU connector.
(c) Measure the resistance.

**Standard resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1B-10 (BZR) - A12-1</td>
<td>Below 1 Ω</td>

<tr>
<td>1B-10 (BZR) or A12-1 - Body ground</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>1B-6 (BZR2) or A12-2 - Body ground</td>
<td>10 kΩ or higher</td>
</tr>
</tbody>
</table>

(d) Reconnect the buzzer connector.
(e) Reconnect the main body ECU connector.

**NG**  REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MAIN BODY ECU
KEY REMINDER WARNING SYSTEM

PRECAUTION

1. DISCONNECT AND RECONNECT CABLE OF NEGATIVE BATTERY TERMINAL

NOTICE:
When disconnecting the cable from the negative (-) battery terminal, initialize the following systems after the cable is reconnected.

<table>
<thead>
<tr>
<th>System Name</th>
<th>See procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>METER / GAUGE SYSTEM</td>
<td>See page ME-10</td>
</tr>
</tbody>
</table>

(a) Before performing electronic work, disconnect the cable from the negative (-) battery terminal in order to prevent it from shorting and burning out.

(b) Before disconnecting and reconnecting the battery cable, turn the ignition switch OFF and the headlight dimmer switch OFF. Then loosen the terminal nut completely. Do not damage the cable or terminal.

(c) When the battery cable is disconnected, the clock and radio settings and stored DTCs are erased. Therefore, before disconnecting the battery cable, make a note of them.

SYSTEM DESCRIPTION

1. KEY REMINDER WARNING SYSTEM DESCRIPTION
   (a) When the driver side door is opened with the ignition key in the ACC or LOCK position, this system causes the key reminder warning buzzer to sound in order to warn the driver that the ignition key has not been removed.
HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
• Use these procedures to troubleshoot the key reminder warning system.
• *: Use the intelligent tester.

1. VEHICLE BROUGHT TO WORKSHOP

2. INSPECT BATTERY VOLTAGE

   Standard voltage:
   11 to 14 V
   If the voltage is below 11 V, recharge or replace the battery before proceeding.

3. PROBLEM SYMPTOMS TABLE

NEXT

END
OPERATION CHECK

1. CHECK FUNCTION
   (a) Check that the key reminder warning buzzer sounds.
      (1) With the driver side door closed, insert the key into the ignition key cylinder and then turn the key to LOCK or ACC.
      (2) Check that the buzzer sounds intermittently when the driver side door is open.
   (b) Check that the key reminder warning buzzer stops.
      (1) Check that the buzzer stops sounding if any of the following operations is performed while the buzzer is sounding:
          • Close the driver side door (front door courtesy switch is off).
          • Turn the ignition switch ON.
          • Remove the key from the ignition key cylinder.
PROBLEM SYMPTOMS TABLE

HINT:
Use the table below to help determine the causes of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

<table>
<thead>
<tr>

</tbody>
</table>

If the result is not as specified, there may be a malfunction in the wire harness.
DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows a switch, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.
(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON.
(c) Read the DATA LIST.

Key Reminder Buzzer does not Sound

DESCRIPTION
The key reminder warning buzzer sounds when the driver side door is opened while the ignition switch is in the LOCK or ACC position. The key reminder warning buzzer is activated when the main body ECU sends a key switch signal and driver side courtesy switch signal to the combination meter.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 READ VALUE OF INTELLIGENT TESTER (D DOR CTY SW)

   (a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the items below in the "DATA LIST" and read the display on the intelligent tester.

### BODY

<table>
<thead>
<tr>
<th>Item</th>
<th>Measurement Item / Display (Range)</th>
<th>Normal Condition</th>
<th>Diagnostic Note</th>
</tr>
</thead>
</table>
| D DOR CTY SW | Driver side door courtesy switch signal / ON or OFF | ON: Driver side door is open  
OFF: Driver side door is closed                                                | -               |

**OK:**
When the driver side door is opened/closed, the display will change as shown above.

![OK](image)

**Go to step 4**

### 2 INSPECT FRONT DOOR COURTESY SWITCH (DRIVER SIDE)

(a) Remove the front door courtesy switch (driver side).
(b) Measure the resistance.
   **Standard resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - Body ground</td>
<td>Not pushed (ON)</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>1 - Body ground</td>
<td>Pushed (OFF)</td>
<td>10 kΩ or higher</td>
</tr>
</tbody>
</table>

(c) Reinstall the front door courtesy switch (driver side).

![NG](image)

**REPLACE FRONT DOOR COURTESY SWITCH (DRIVER SIDE)**
3 CHECK HARNESS AND CONNECTOR (FRONT DOOR COURTESY SWITCH (DRIVER SIDE) - MAIN BODY ECU)

(a) Disconnect the J1 front door courtesy switch (driver side) connector.
(b) Disconnect the E7 main body ECU connector.
(c) Measure the resistance.

**Standard resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>J1-1 - E7-23 (DCTY)</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>J1-1 or E7-23 (DCTY) - Body ground</td>
<td>10 kΩ or higher</td>
</tr>
</tbody>
</table>

(d) Reconnect the courtesy switch and main body ECU connectors.

**NG** REPAIR OR REPLACE HARNESS OR CONNECTOR

4 READ VALUE OF INTELLIGENT TESTER (KEY UNLK WRN SW)

(a) Connect the intelligent tester with CAN VIM to the DLC3.
(b) Turn the ignition switch ON and turn the intelligent tester main switch ON.
(c) Select the item below in the "DATA LIST" and read the display on the intelligent tester.

**BODY**

<table>
<thead>
<tr>
<th>Item</th>
<th>Measurement Item / Display (Range)</th>
<th>Normal Condition</th>
<th>Diagnostic Note</th>
</tr>
</thead>
</table>
| KEY UNLK WRN SW   | Unlock warning switch signal / ON or OFF | ON: Key is in ignition key cylinder
                         OFF: No key is in ignition key cylinder | -              |

**OK:** When the ignition key is operated, the display changes as shown above.

**OK** Go to step 7
5 INSPECT UNLOCK WARNING SWITCH ASSEMBLY

(a) Remove the unlock warning switch assembly.
(b) Measure the resistance.
   **Standard resistance**
<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 2</td>
<td>Not pushed</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>1 - 2</td>
<td>Pushed</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>
(c) Reinstall the unlock warning switch assembly.

NG REPLACE UNLOCK WARNING SWITCH ASSEMBLY

OK

6 CHECK HARNESS AND CONNECTOR (UNLOCK WARNING SWITCH ASSEMBLY - MAIN BODY ECU)

(a) Disconnect the E21 unlock warning switch assembly connector.
(b) Disconnect the E8 main body ECU connector.
(c) Measure the resistance.
   **Standard resistance**
<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>E21-1 - E8-14 (KSW)</td>
<td>Below 1 Ω</td>

<tr>
<td>E21-1 or E8-14 (KSW) - Body ground</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>E21-2 - Body ground</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>
(d) Reconnect the unlock warning switch and the main body ECU connectors.

NG REPAIR OR REPLACE HARNESS OR CONNECTOR

OK
7  INSPECT MAIN BODY ECU

(a) Measure the voltage.

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>E8-15 (KSWO) - Body ground</td>
<td>Key is in ignition key cylinder</td>
<td>Below 1 V</td>
</tr>
<tr>
<td>E8-15 (KSWO) - Body ground</td>
<td>No key is in ignition key cylinder</td>
<td>10 to 14 V</td>
</tr>
<tr>
<td>E8-11 (DCY2) - Body ground</td>
<td>Driver side door is open</td>
<td>Below 1 V</td>
</tr>
<tr>
<td>E8-11 (DCY2) - Body ground</td>
<td>Driver side door is closed</td>
<td>10 to 14 V</td>
</tr>
</tbody>
</table>

NG  REPLACE MAIN BODY ECU

OK

8  CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - MAIN BODY ECU)

(a) Disconnect the E8 main body ECU connector.
(b) Disconnect the E13 combination meter assembly connector.
(c) Measure the resistance.

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>E8-15 (KSWO) - E13-9 (KSW)</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>E8-15 (KSWO) or E13-9 (KSW) - Body ground</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>E8-11 (DCY2) - E13-29 (DOOR)</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>E8-11 (DCY2) or E13-29 (DOOR) - Body ground</td>
<td>10 kΩ or higher</td>
</tr>
</tbody>
</table>

(d) Reconnect the main body ECU and combination meter assembly connectors.

NG  REPAIR OR REPLACE HARNESS OR CONNECTOR
OK

REPLACE COMBINATION METER ASSEMBLY
TRANSMITTER BATTERY

COMPONENTS
REMOVAL

1. REMOVE TRANSMITTER BATTERY
   (a) Remove the transmitter battery.
   (1) Using a screwdriver with its tip wrapped in protective tape, pry apart the transmitter case.
       NOTICE:
       Do not use excessive force when prying apart the transmitter case.

   (2) Remove the battery (lithium battery: CR2016).
       NOTICE:
       • Do not push the terminals with your finger.
       • Do not use excessive force when prying up the battery (lithium battery: CR2016) as this may damage the terminals.
       • Do not touch the battery with wet hands. Water may cause rust.
       • Do not touch or move any components inside the transmitter as this may interfere with its proper operation.

INSTALLATION

1. INSTALL TRANSMITTER BATTERY
   (a) Install the transmitter battery.
   (1) Install the battery (lithium battery: CR2016) with the positive (+) side up, as shown in the illustration.
       NOTICE:
       • Make sure that the positive (+) side and the negative (-) side of the transmitter battery are correctly matched up with the transmitter terminals.
       • Do not bend the transmitter battery electrode during insertion.
       • Keep the transmitter cover interior free of dust and oil.

   (2) Install the transmitter case securely.
DOOR CONTROL TRANSMITTER MODULE

REGISTRATION

HINT:
• Recognition code registration is necessary when the door control transmitter or the door control receiver is replaced with a new one.
• Add Mode is used to register new recognition codes while retaining the previously registered codes. This mode is used when new transmitters are added. If the number of registered codes exceeds 4, the previously registered codes will be erased in order, starting from the first registered code.
• Rewrite Mode is used to erase all the previously registered recognition codes in order to register new recognition codes. This mode is used when the transmitter or the door control receiver is replaced with a new one.
• Confirmation Mode is used to confirm how many recognition codes have already been registered before any additional recognition codes are registered.
• Prohibition Mode is used to erase all the registered codes and disable the wireless door lock function. This mode is used when the transmitters are lost.
• The registration procedure described on the following pages must be performed in order.

1. REGISTER RECOGNITION CODE USING INTELLIGENT TESTER
   (a) Turn the ignition switch to the ON position.
   (b) Select Add or Rewrite Mode according to the intelligent tester display.
   (c) The number of registered codes is indicated.
   (d) Registration of the door control transmitter.
      (1) Within 30 seconds of Add Mode or Rewrite Mode being selected, press LOCK and UNLOCK switches on the transmitter switch simultaneously.
      (2) Within 3 seconds of moving your finger away from the switches, press either switch of the transmitter for more than 1.0 seconds.
(3) The main body ECU automatically performs the power door LOCK-UNLOCK operation after the switch on the transmitter is turned off, in order to indicate whether registration has been completed correctly or not.

Response to registration completion:

<table>
<thead>
<tr>
<th>LOCK-UNLOCK Occurs Once</th>
<th>LOCK-UNLOCK Occurs Twice</th>
</tr>
</thead>
<tbody>
<tr>
<td>Registration of recognition code has been completed.</td>
<td>Registration of recognition code has failed.</td>
</tr>
</tbody>
</table>

T1: Approximately 1 second

HINT:
If the LOCK-UNLOCK operation is performed twice, registration of the recognition code has failed. Perform registration procedures from the beginning once again.

(4) If registration is continued, the next recognition code must be registered in the transmitter within 30 seconds.

HINT:
Up to four recognition codes can be registered.

(e) Ending registration mode.

(1) Registration mode will end when any of the following occurs:
- The intelligent tester is used to order completion.
- The intelligent tester is disconnected.

(f) Registration of the recognition codes (Add Mode and Rewrite Mode) is completed.
2. REGISTER RECOGNITION CODE MANUAL
OPERATION
(a) Check that the following conditions are met.
   • No key is in the ignition key cylinder.
   • Only driver side door is open.
(b) Insert the key into the ignition key cylinder, and remove it twice within 5 seconds.
(c) Perform the following operations within 40 seconds.
   (1) Close and open the driver side door twice.
   (2) Insert the key into the ignition key cylinder, then remove it.
(d) Perform the following operations within 40 seconds.
   (1) Close and open the driver side door twice.
   (2) Insert the key into the ignition key cylinder and close all doors.
(e) Perform the following operations within 40 seconds.
   (1) Turn the ignition switch from LOCK to ON and back to LOCK 1 to 5 times at approximately 1 second intervals to select a mode (see the table below).

Number of ON-LOCK operations of ignition switch:

- **Add Mode**: ON-LOCK operation: Once
- **Rewrite Mode**: ON-LOCK operation: Twice
- **Confirmation Mode**: ON-LOCK operation: 3 times
- **Prohibition Mode**: ON-LOCK operation: 5 times

T1: Approximately 1 second
HINT:
If the number of ignition switch ON-LOCK operations is 0, 4, 6 or more, there will be no response (power DOOR LOCK and UNLOCK operation) to show which mode has been selected.

(2) Remove the key from the ignition key cylinder.
(f) The main body ECU automatically performs power door LOCK-UNLOCK operations to indicate which mode has been selected.

Response to mode selection (Power door lock operation):

<table>
<thead>
<tr>
<th>Mode</th>
<th>LOCK-UNLOCK operation:</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add Mode</td>
<td>Once</td>
<td>T1: Approximately 1 second T2: Approximately 2 seconds</td>
</tr>
<tr>
<td>Confirmation Mode</td>
<td>The number of registered codes (1 to 5 times)</td>
<td>1 cycle</td>
</tr>
<tr>
<td>Rewrite Mode</td>
<td>Twice</td>
<td>T1: Approximately 1 second T2: Approximately 2 seconds</td>
</tr>
<tr>
<td>Prohibition Mode</td>
<td>5 times</td>
<td>T1: Approximately 1 second</td>
</tr>
</tbody>
</table>

HINT:
- In Confirmation Mode, LOCK-UNLOCK operation will occur once for each recognition code that has been registered. For example, if 2 recognition codes have been registered, the LOCK-UNLOCK operation will occur twice.
- In Confirmation Mode, if no recognition codes have been registered, LOCK-UNLOCK operation will occur 11 times.
• If Confirmation Mode or Prohibition Mode is selected, the operation ends after the response to the selected mode is completed.

(g) Register a new recognition code (Add Mode or Rewrite Mode) in accordance with the following procedure.

1. Within 40 seconds of Add Mode or Rewrite Mode being selected, press the LOCK and UNLOCK switches on the transmitter switch simultaneously for 1.0 to 1.5 seconds. Within 3 seconds of moving your finger away from the switches, press either switch of the transmitter for more than 1.0 second.

2. Within 3 seconds of the transmitter switch being released, the LOCK-UNLOCK operation will be automatically performed once if the registration of the recognition code is correctly completed.

(h) If multiple transmitters need to be registered, repeat the registration of a new recognition code procedure within 40 seconds of the previous registration.

Response to registration completion:

- **LOCK-UNLOCK Occurs Once**
  - Registration of recognition code has been completed.
  - 1 cycle

- **LOCK-UNLOCK Occurs Twice**
  - Registration of recognition code has failed.
  - T1: Approximately 1 second

HINT:
If the LOCK-UNLOCK operation is performed twice, the registration of the recognition code has failed, so perform the registration procedure from the beginning once again.

If multiple transmitters need to be registered, repeat the registration of a new recognition code procedure within 40 seconds of the previous registration.
(i) If any of the following conditions is met, the Registration Mode will end:

(1) The key is inserted into the ignition key cylinder.
(2) Any doors are opened.
(3) 40 seconds or more elapse after code registration.

(j) Registration of the recognition codes (Add Mode and Rewrite Mode) is completed.
INSPECTION

1. INSPECT DOOR CONTROL TRANSMITTER MODULE
   (a) Check the operation of the transmitter.
       (1) Remove the battery (lithium battery) from the transmitter.
       (2) Install a new or normal battery (lithium battery).
       (3) If a new or normal battery is not available, connect 2 new 1.5 V batteries in series. Connect the positive (+) battery electrode to the battery receptacle side terminal, and the negative (-) battery electrode to the bottom terminal, and apply a voltage of 3 V to the transmitter.
       (4) In a location that is approximately 1 m (3.28ft.) away from the driver side outside door handle, point the key plate of the transmitter at the vehicle and check the operation of the transmitter by pressing the transmitter switches on the transmitter body.

   Standard:
   The door lock/unlock can be operated via remote control.

   HINT:
   • The maximum operational distance differs depending on the way the transmitter is held and the location.
   • Since the transmitter uses faint electric waves, the operational distance might be shortened if noise or a strong electric wave occurs in the area where the frequency is used.

   (5) Install the battery (lithium battery).
   (b) Check the battery capacity.

   HINT:
   • The capacity of the battery can be checked only when the battery is installed in the transmitter. For a lithium battery used in the transmitter, a voltage of more than 2.5 V is shown on the tester until the energy is completely consumed without the battery installed in the transmitter. Therefore, it is necessary to measure the voltage with the battery installed in the transmitter (a resistance of 1.2 kΩ is applied to the battery) to check the amount of energy left in the battery.
   • If the transmitter is faulty, the amount of energy left in the battery might not be checked correctly.
1. Remove the battery (lithium battery) from the transmitter.

2. Connect the lead to the negative (-) terminal of the transmitter and install the battery.

3. Connect the positive (+) tester probe to the positive (+) side of the battery (lithium battery) and the negative (-) tester probe to the lead respectively.

4. Press one of the transmitter switches on the transmitter for approximately 1 second.

5. Press either transmitter switch again and check the voltage.

**Standard Voltage:**

- 2.2 V or higher

**HINT:**

- If the temperature of the battery is low, the inspection cannot be performed correctly. If the result of the test is less than 2.2 V, conduct the test again after leaving the battery in a place with a temperature of 18°C (64°F) for more than 30 minutes.

- The automatic power-off function causes the battery voltage to be 2.5 V or more (a voltage with no resistance applied to the battery) when 0.8 seconds have passed after the switch is pressed. Therefore, read the voltage immediately after the switch is pressed.

- Press the switch at least 3 times before reading the voltage. If the battery has just been returned to 18°C (64°F), the voltage may be unusually high for the first or second voltage reading.

6. Remove the lead.

7. Set the battery (lithium battery) in the transmitter.
DOOR CONTROL SWITCH (for Driver Side)

COMPONENTS

- FRONT ARMREST BASE
- UPPER PANEL
- POWER WINDOW REGULATOR
- MASTER SWITCH ASSEMBLY
- x3
REMOVAL
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE FRONT ARMREST BASE UPPER PANEL (See page WS-25)
3. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY
   (a) Remove the 3 screws and the power window regulator master switch.

INSPECTION
1. INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY
   (a) Check the resistance of the door control switch.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Switch Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 2</td>
<td>Locked</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>1 - 2</td>
<td>OFF</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>1 - 5</td>
<td>OFF</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>1 - 5</td>
<td>Unlocked</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

If the result is not as specified, replace the power window regulator master switch.

INSTALLATION
1. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY
   (a) Install the power window regulator master switch with the 3 screws.
2. INSTALL FRONT ARMREST BASE UPPER PANEL (See page WS-27)
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
DOOR CONTROL SWITCH (for Front Passenger Side)

COMPONENTS

- FRONT ARMREST BASE
- UPPER PANEL
- DOOR CONTROL SWITCH
REMOVAL
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE FRONT ARMREST BASE UPPER PANEL
   (See page ED-9)
3. REMOVE DOOR CONTROL SWITCH
   (a) Using a screwdriver with its tip wrapped in protective tape, disengage the 2 claws and remove the door control switch.

INSPECTION
1. INSPECT DOOR CONTROL SWITCH
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 - 6</td>
<td>Locked</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>3 - 6</td>
<td>Unlocked</td>
<td>10 kΩ or higher</td>

<tr>
<td>3 - 5</td>
<td>Locked</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>3 - 5</td>
<td>Unlocked</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

If the result is not as specified, replace the door control switch.

INSTALLATION
1. INSTALL DOOR CONTROL SWITCH
   (a) Engage the 2 claws and install the door control switch.
2. INSTALL FRONT ARMREST BASE UPPER PANEL
   (See page ED-25)
3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)

3. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-15)

4. REMOVE FRONT FLOOR FOOTREST (See page IR-2)

5. REMOVE FOOTREST CLIP (See page IR-2)

6. REMOVE COWL SIDE TRIM BOARD RH (See page IR-15)

7. REMOVE COWL SIDE TRIM BOARD LH (See page IR-15)

8. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-10)

9. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-10)

10. REMOVE ASSIST GRIP PLUG (See page IR-17)

11. REMOVE ASSIST GRIP ASSEMBLY (See page IR-17)

12. REMOVE FRONT PILLAR GARNISH RH (See page IR-18)

13. REMOVE FRONT PILLAR GARNISH LH (See page IR-18)

14. REMOVE INSTRUMENT PANEL GARNISH LH (See page IP-10)

15. REMOVE INSTRUMENT PANEL GARNISH RH (See page IP-10)

16. REMOVE INTEGRATION CONTROL AND PANEL ASSEMBLY (See page IP-11)

17. REMOVE RADIO RECEIVER ASSEMBLY (See page AV-55)

18. REMOVE PARKING BRAKE HOLE COVER SUB-ASSEMBLY (See page IP-11)

19. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transmission) (See page IP-11)

20. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (for 4WD) (See page IP-11)

21. REMOVE CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-12)

22. REMOVE BOX BOTTOM MAT (See page IP-12)

23. REMOVE FRONT CONSOLE BOX (See page IP-12)

24. REMOVE CONSOLE UPPER PANEL NO. 1 GARNISH (See page IP-12)
25. REMOVE INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-13)
26. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-13)
27. REMOVE HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-13)
28. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LH (See page IP-14)
29. REMOVE LOWER INSTRUMENT PANEL LH (See page IP-14)
30. REMOVE INSTRUMENT CLUSTER LOWER FINISH PANEL (See page IP-14)
31. REMOVE COMBINATION METER ASSEMBLY (See page IP-14)
32. REMOVE GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-15)
33. REMOVE INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY RH (See page IP-15)
34. REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-16)
35. REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-16)
36. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-16)
37. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (See page AV-62)
38. REMOVE ASSIST GRIP RETAINER RH (See page IP-16)
39. REMOVE ASSIST GRIP RETAINER LH (See page IP-16)
40. DISCONNECT PASSENGER AIRBAG CONNECTOR (See page IP-16)
41. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-16)
42. REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-21)
43. REMOVE IGNITION SWITCH LOCK CYLINDER AND KEY SET
   (a) Turn the ignition switch lock cylinder to the ACC position.
   (b) Push down the stop pin with a screwdriver and pull out the ignition switch lock cylinder.
44. REMOVE KEY INTER LOCK SOLENOID (for Automatic Transmission)
(a) Disconnect the clamp from the steering column bracket upper.

(b) Remove the 2 screws and the key inter lock solenoid.

45. REMOVE UNLOCK WARNING SWITCH
(a) Disconnect the connector.
(b) Remove the unlock warning switch toward the rear of the vehicle by pushing up the center part.

INSPECTION

1. INSPECT UNLOCK WARNING SWITCH
(a) Check the resistance.
   (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 2</td>
<td>Pin released</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>1 - 2</td>
<td>Pin pushed in</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

If the result is not as specified, replace the unlock warning switch.
INSTALLATION

1. INSTALL UNLOCK WARNING SWITCH
   (a) Install the unlock warning switch onto the steering column bracket upper.
   (b) Connect the connector.

2. INSTALL KEY INTER LOCK SOLENOID (for Automatic Transmission)
   (a) Install the key inter lock solenoid with the 2 screws.
   (b) Install the clamp onto the steering column bracket upper.

3. INSTALL IGNITION SWITCH LOCK CYLINDER AND KEY SET
   (a) Make sure that the ignition switch lock cylinder is in the ACC position.
   (b) Install the ignition switch lock cylinder.

4. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-26)

5. CONNECT PASSENGER AIRBAG CONNECTOR (See page IP-26)

6. REMOVE INSTRUMENT PANEL FINISH PANEL END LH (See page IP-27)

7. INSTALL ASSIST GRIP RETAINER RH (See page IP-27)

8. INSTALL ASSIST GRIP RETAINER LH (See page IP-27)

9. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (See page AV-62)
10. INSTALL NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-27)
11. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY (See page IP-27)
12. INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-27)
13. INSTALL INSTRUMENT PANEL LOWER FINISH PANEL SUB-ASSEMBLY RH (See page IP-28)
14. INSTALL GLOVE COMPARTMENT DOOR ASSEMBLY (See page IP-28)
15. INSTALL COMBINATION METER ASSEMBLY (See page IP-28)
16. INSTALL INSTRUMENT CLUSTER LOWER FINISH PANEL (See page IP-29)
17. INSTALL LOWER INSTRUMENT PANEL LH (See page IP-29)
18. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL SUB-ASSEMBLY LH (See page IP-29)
19. CONNECT HOOD LOCK CONTROL LEVER SUB-ASSEMBLY (See page IP-30)
20. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY (See page IP-30)
21. INSTALL INSTRUMENT LOWER COVER SUB-ASSEMBLY (See page IP-30)
22. INSTALL CONSOLE UPPER PANEL NO. 1 GARNISH (See page IP-31)
23. INSTALL FRONT CONSOLE BOX ASSEMBLY (See page IP-31)
24. INSTALL BOX BOTTOM MAT (See page IP-31)
25. INSTALL CONSOLE UPPER REAR PANEL SUB-ASSEMBLY (See page IP-31)
26. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for 4WD) (See page IP-32)
27. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (for Manual Transmission) (See page IP-32)
28. INSTALL PARKING BRAKE HOLE COVER SUB-ASSEMBLY (See page IP-32)
29. INSTALL RADIO RECEIVER ASSEMBLY (See page AV-56)
30. INSTALL INTEGRATION CONTROL AND PANEL ASSEMBLY (See page IP-32)
31. INSTALL INSTRUMENT PANEL GARNISH LH (See page IP-33)
32. INSTALL INSTRUMENT PANEL GARNISH RH (See page IP-33)
33. INSTALL FRONT PILLAR GARNISH RH (See page IR-43)
34. INSTALL FRONT PILLAR GARNISH LH (See page IR-43)
35. INSTALL ASSIST GRIP ASSEMBLY (See page IR-43)
36. INSTALL ASSIST GRIP PLUG (See page IR-44)
37. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IP-33)
38. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IP-33)
39. INSTALL COWL SIDE TRIM BOARD RH (See page IR-45)
40. INSTALL COWL SIDE TRIM BOARD LH (See page IR-45)
41. INSTALL FOOTREST CLIP (See page IR-2)
42. INSTALL FRONT FLOOR FOOTREST (See page IR-2)
43. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-45)
44. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-45)
45. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
   Torque: 3.9 N\text{m} (40 \text{kgf} \cdot \text{cm}, 35 \text{in.} \cdot \text{lbf})

REMOVAL

HINT:
• Use the same procedure for both the RH and LH sides.
• The procedure described below is for the RH side.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT ARMREST BASE UPPER PANEL (See page ED-9)

3. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-9)

4. REMOVE FRONT NO. 2 DOOR SERVICE HOLE COVER (See page ED-10)

5. REMOVE OUTER REAR VIEW MIRROR (See page MI-8)

6. REMOVE FRONT DOOR GLASS OUTER WEATHERSTRIP ASSEMBLY (See page ET-39)

7. REMOVE FRONT NO. 1 SPEAKER (See page AV-58)

8. REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-11)

9. REMOVE FRONT DOOR INSIDE PANEL PLATE (See page ED-11)

10. REMOVE FRONT DOOR CHECK ASSEMBLY (See page ED-11)

11. REMOVE FRONT DOOR WEATHERSTRIP (See page ED-11)

12. REMOVE FRONT DOOR GLASS RUN (See page ED-12)

13. REMOVE FRONT DOOR FRAME SUB-ASSEMBLY FRONT LOWER (See page ED-12)

14. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-12)

15. REMOVE FRONT DOOR WINDOW FRAME REAR LOWER (See page ED-12)

16. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-13)

17. REMOVE FRONT DOOR LOCK
   (a) Using "Torx" socket wrench T30, loosen the 3 screws.
   (b) Move the front door lock downward, remove the outside handle frame link and remove the front door lock.
(c) Disengage the 5 claws and open the cover.

(d) Disconnect the front door lock remote control cable and the front door inside locking cable.

(e) Remove the door lock wire harness seal.

**INSPECTION**

1. **INSPECT FRONT DOOR LOCK LH**
   
   (a) Check the operation.
   
   (1) Apply battery voltage to the front door lock and check the operation of the front door lock motor.
   
   **Standard**
   
<table>
<thead>
<tr>
<th>Measurement Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery positive (+) → Terminal 4</td>
<td>Locks</td>
</tr>
<tr>
<td>Battery negative (-) → Terminal 2</td>
<td>Unlocks</td>
</tr>
</tbody>
</table>
   
   If the result is not as specified, replace the front door lock.

   (b) Check the resistance of the unlock detection switch.
   
   (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.
   
   **Standard Resistance**
   
<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Door Lock Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 - 8</td>
<td>Locked</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>7 - 8</td>
<td>Unlocked</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>
   
   If the result is not as specified, replace the front door lock.
(c) Check the resistance of the door lock and unlock switch.
   (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

   **Standard Resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Door Lock Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 - 9</td>
<td>Locked</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>7 - 9</td>
<td>Unlocked</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>7 - 10</td>
<td>Locked</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>7 - 10</td>
<td>Unlocked</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

If the result is not as specified, replace the front door lock.

2. **INSPECT FRONT DOOR LOCK RH**

(a) Check the operation.
   (1) Apply battery voltage to the front door lock and check the operation of the front door lock motor.

   **Standard**

<table>
<thead>
<tr>
<th>Measurement Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Battery positive (+) → Terminal 3</td>
<td>Locks</td>
</tr>
<tr>
<td>Battery negative (-) → Terminal 1</td>
<td>Unlocks</td>
</tr>
</tbody>
</table>

If the result is not as specified, replace the front door lock.

(b) Check the resistance of the unlock detection switch.
   (1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

   **Standard Resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Door Lock Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>7 - 8</td>
<td>Locked</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>7 - 8</td>
<td>Unlocked</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

If the result is not as specified, replace the front door lock.
(c) Check the resistance of door lock and unlock switch.

(1) Using an ohmmeter, measure the resistance and check the results in accordance with the value(s) in the table below.

**Standard Resistance**

<table>
<thead>
<tr>
<th>Tester Connection</th>
<th>Door Lock Condition</th>
<th>Specified Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 - 8</td>
<td>Locked</td>
<td>Below 1 Ω</td>
</tr>
<tr>
<td>6 - 8</td>
<td>Unlocked</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>5 - 8</td>
<td>Locked</td>
<td>10 kΩ or higher</td>
</tr>
<tr>
<td>5 - 8</td>
<td>Unlocked</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

If the result is not as specified, replace the front door lock.
IN INSTALLATION

1. INSTALL FRONT DOOR LOCK

NOTICE:

• If reusing a door lock that has been removed, replace the packing in the connecting part with new.
• Make sure that no grease or dirt adheres to the packing surface in the connecting part.
  (a) Apply MP grease to the sliding and rotating areas of the front door lock.
  (b) Connect the front door lock remote control cable and the front door inside locking cable.
  (c) Engage the 5 claws and close the cover.
  (d) Insert the door lock open rod into the front door lock, then set it to the door panel.
    NOTICE:
    Make sure that the outside handle link is securely engaged with the door lock.
  (e) Apply adhesive to the threads of the screws.
    Adhesive:
    Toyota Genuine Adhesive 1324, Three Bond 1324 or the equivalent
  (f) Using "Torx" socket wrench T30, install the front door lock with the 3 screws.
    Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

2. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY
(See page ED-20)
3. INSTALL FRONT DOOR WINDOW FRAME REAR LOWER (See page ED-21)
4. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-21)
5. INSTALL FRONT DOOR FRAME SUB-ASSEMBLY FRONT LOWER (See page ED-21)
6. INSTALL FRONT DOOR GLASS RUN (See page ED-21)
7. INSTALL FRONT DOOR WEATHERSTRIP (See page ED-22)
8. INSTALL FRONT DOOR CHECK ASSEMBLY (See page ED-23)
9. INSTALL FRONT DOOR INSIDE PANEL PLATE (See page ED-23)
10. INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-11)
11. INSTALL FRONT NO. 1 SPEAKER (See page AV-58)
12. INSTALL FRONT DOOR GLASS OUTER WEATHERSTRIP ASSEMBLY (See page ET-40)
13. INSTALL OUTER REAR VIEW MIRROR (See page MI-11)
14. INSTALL FRONT NO. 2 DOOR SERVICE HOLE COVER (See page ED-24)
15. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-24)
16. INSTALL FRONT ARMREST BASE UPPER PANEL (See page ED-25)
17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)

● Non-reusable part
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE BACK DOOR TRIM COVER RH (See page ED-48)

3. REMOVE BACK DOOR TRIM COVER LH
   HINT:
   Use the same procedure as for the RH side.

4. REMOVE DOOR TRIM RETAINER CAP (See page ED-48)

5. REMOVE BACK DOOR TRIM BOARD (See page ED-49)

6. REMOVE BACK DOOR SERVICE HOLE COVER (See page ED-49)

7. REMOVE BACK DOOR LOCK
   (a) Disconnect the back door lock rod as shown in the illustration.
   (b) Disconnect the connector.
   (c) Loosen bolt A.
   (d) Using "Torx" socket wrench T30, remove the 3 screws and the back door lock.
   **NOTICE:**
   Do not drop or damage the back door lock when removing the screws.
   **HINT:**
   Remove the back door lock through the service hole.

8. REMOVE BACK DOOR LOCK CYLINDER
   (a) Disconnect the connector and the 2 clamps, then remove the retainer.
(b) Remove the back door lock cylinder.

**INSPECTION**

1. **INSPECT BACK DOOR LOCK**
   
   (a) Check the operation of the back door lock actuator.
       (1) Apply battery voltage to the back door lock actuator and check the operation of the back door lock motor.

   **Standard**

<table>
<thead>
<tr>

<td>10 kΩ or higher</td>
</tr>
<tr>
<td>1 - 3</td>
<td>Unlocked</td>
<td>Below 1 Ω</td>
</tr>
</tbody>
</table>

   If the result is not as specified, replace the back door lock cylinder.
INSTALLATION

1. INSTALL BACK DOOR LOCK
   (a) Apply MP grease to the sliding and rotating areas of the back door lock.
   (b) Using "Torx" socket wrench T30, install the back door lock with the 3 screws.
       Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (c) Tighten bolt A.
       Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (d) Connect the connector.
   (e) Connect the back door lock rod as shown in the illustration.

2. INSTALL BACK DOOR LOCK CYLINDER
   (a) Install the back door lock cylinder.
   (b) Install the retainer, then connect the 2 clamps.

3. INSTALL BACK DOOR SERVICE HOLE COVER (See page ED-56)

4. INSTALL BACK DOOR TRIM BOARD (See page ED-57)

5. INSTALL DOOR TRIM RETAINER CAP (See page ED-57)

6. INSTALL BACK DOOR TRIM COVER RH (See page ED-57)

7. INSTALL BACK DOOR TRIM COVER LH
   HINT: Use the same procedure as for the RH side.

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
   Torque: 3.9 N*m (40 kgf*cm, 35 in.*lbf)
WIRELESS DOOR LOCK BUZZER

COMPONENTS

- FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY
- NO. 1 WIRING HARNESS PROTECTOR
- WIRELESS DOOR LOCK BUZZER

x5
REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY
   (a) Disengage the 6 clips.
   (b) Disengage the 3 clips and remove the front fender splash shield.

3. REMOVE NO. 1 WIRING HARNESS PROTECTOR
   (a) Disengage the 4 claws and remove the No. 1 wiring harness protector.

4. REMOVE WIRELESS DOOR LOCK BUZZER
   (a) Disengage the clamp of the wireless door lock buzzer.
(b) Disconnect the connector and remove the wireless door lock buzzer.

INSPECTION
1. INSPECT WIRELESS DOOR LOCK BUZZER
   (a) Check the resistance.
      (1) Using an ohmmeter, measure the resistance between the terminals.
      
      **Standard Resistance**

      | Tester Connection | Specified Condition |
      |-------------------|---------------------|
      | 1 (B) - 2 (B2)    | Approximately 1 kΩ  |

If the result is not as specified, replace the wireless door lock buzzer.

INSTALLATION
1. INSTALL WIRELESS DOOR LOCK BUZZER
   (a) Connect the connector.

   (b) Engage the clamp and install the wireless door lock buzzer.

2. INSTALL NO. 1 WIRING HARNESS PROTECTOR
   (a) Engage the 4 claws and install the No. 1 wiring harness protector.
3. **INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY**
   (a) Engage the 3 clips and install the front fender splash shield.
   
   (b) Engage the 6 clips.

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
   Torque: 3.9 N\*m (40 kgf\*cm, 35 in.*lb)
